Discussions

Overview of Legal and psychological disorders in law dealing with Iran and countries indicate that they are no correct approach that leads to solving the financial and social costs of mental disorders is minimal, there is not. In our country strong coercive deal with sexual dysfunction, Has led to the phenomenon subcutaneous flows, not only cannot be resolved, but in the context of divorce, wife beating, sexual debility foundations of family and appearance of large deviations in the country. The recognition of LGBT rights as examples of sexual dysfunction in other countries, this would indicate that these countries have embraced the totality of the nature of mental disorders, But the way to deal with this phenomenon in greater public acceptance has been

just as negligent It is also clear that the long term fundamentals of the threat to the community. Finally, both globally and in our country, Iran, Social laws in line with sexual dysfunction are very primitive and immature.
